

Snake Game User Guide

This guide explains how to play the Snake game using VirtualController.

Start the Server and Launcher

1. Run the server:

```
.\build\bin\Release\GameServer.exe
```

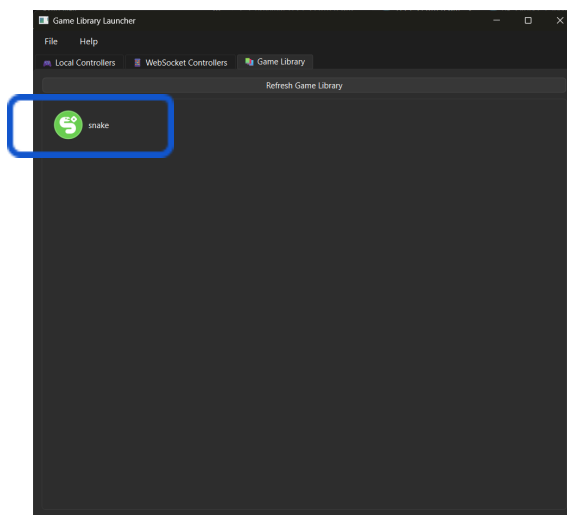

2. Start the launcher:

```
.\build\bin\Release\GameLibraryLauncher.exe [ip/hostname] [port]
```

The default server port is 8765.

Start Snake

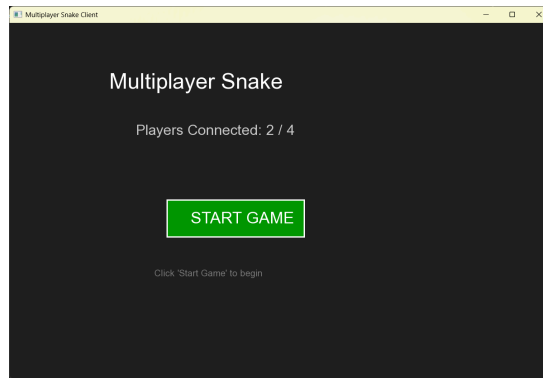

1. Open the **Game Library** tab.
2. Click **snake** to launch the game.

Game library screen

Lobby Screen

Snake starts in a lobby. The lobby shows the number of connected players and a **START GAME** button.

Snake lobby screen

- If no players are connected yet, connect controllers first.
- Once all players are ready, click **START GAME**.

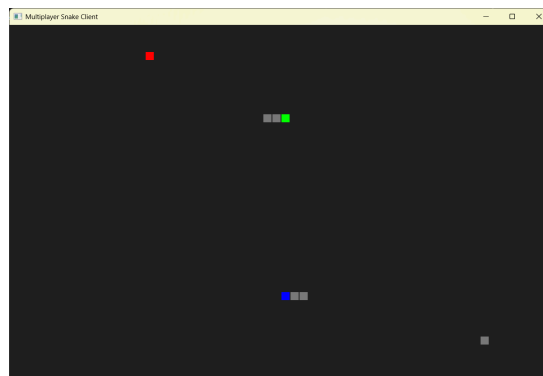

Controls

- **Keyboard (Player 1):** Arrow keys
- **Controller / Mobile device (Player 2+):** D-pad or analog stick

Tip: Each connected device becomes a player. Mix keyboard, controllers, and phones.

Playing the Game

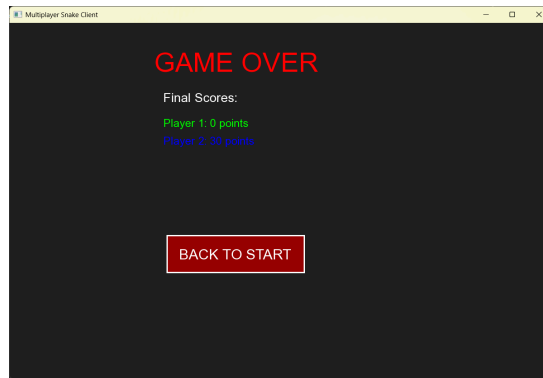

- Move your snake to collect food.
- Avoid walls and other snakes.
- If your snake dies, you are out for the round.
- The last alive player wins.

Snake gameplay

Game Over

When all players are dead, a **GAME OVER** screen appears with final scores. Click **BACK TO START** to return to the lobby and start a new round.

Snake game over

Troubleshooting

- **Game does not start:** Make sure at least one player is connected.
- **Controls not working:** Ensure the game window has focus and the controller is connected.
- **No food or movement:** Check that GameServer is running and connected.

Tips for Multiplayer

- For local play, connect multiple controllers to the same PC.
- For remote play, use mobile devices on the same network as the server.
- Start with 2 players, then add more once everyone is connected.
